5 Case Studies:
Exploring How Bay
Dynamics Customers
Use Risk Fabric® to
Reduce Cyber Risk

[White Papers](#)

Bay Dynamics provides a software platform that calculates the value at risk based on specific threats and vulnerabilities detected in the enterprise environment.

The platform, **Risk Fabric®**, prioritizes remediation actions by those that most significantly reduce the financial impact of cyber risk, and measures how much risk was removed from the business from actions taken.

Risk Fabric®

Risk Fabric enables stakeholders across the business to prioritize their remediation activities and direct their **limited resources** at the risks that matter most.

➤ [LEARN MORE ABOUT RISK FABRIC](#)

Risk Fabric serves as the centerpiece of a sustainable **cyber risk management** program by integrating the four crucial aspects of cyber risk:

RESOURCES

COMPANY

User and Entity Behavioral Analytics (UEBA)

Proprietary, algorithm-based user and entity behavior analytics to detect insider and outsider threat events such as abuse of privilege, dangerous web activity, malware and data exfiltration

IT Business Context

Engages line-of-business application owners to qualify threat alert events before they are sent to incident responders

IT Asset Value

Prioritized threat and vulnerability information based on the value of the impacted asset and potential of a compromise

Leading global companies use Bay Dynamics to manage their cyber security and risk.
