What we do

CyberCube delivers data-driven cyber analytics built specifically for the insurance industry.

We are solely focused on solving the most difficult and important cyber risk challenges in insurance with world-class analytics.

Our team is composed of multi-disciplinary experts across data science, cyber security, software engineering, actuarial modeling and commercial insurance. CyberCube offers a software as a service platform for cyber risk aggregation modeling and insurance underwriting.

Mitigate your cyber insurance risk

Manage the Tail Risk of Insurance Portfolios

Measure the probability and loss potential of systemic cyber-attacks to an insurance portfolio.

[Learn More](#)

Enhance Your Underwriting Strategy

Identify the segments and risk characteristics that result in long-term profitability.

[Learn More](#)

Develop Your Own View of Cyber Risk

Configure frequency and severity controls in the probabilistic model to create your own view of risk.

[Learn More](#)

- Measure the probability and loss potential of systemic cyber-attacks to an insurance portfolio.
- Determine the level of reinsurance necessary to optimize the risk-adjusted return on capital.
- Quantify the key drivers of loss by analyzing detailed insights from the model.

[Learn More About How to Measure Aggregation Risk](#)

Hide

- Simplify the data collection requirements across the insurance value chain.
- Identify the segments and risk characteristics that result in long-term profitability.
- Determine the appropriate catastrophic risk loads for your rating plan.

[Learn More About Making Use of Cyber Data Insurance](#)

Hide

- Gain a deep understanding of the cyber risk landscape enabled by transparent modeling.
- Leverage a multi-dimensional narrative of systemic cyber-attacks to customize your risk outlook.
- Configure frequency and severity controls in the probabilistic model to create your own view of risk.
