

RQ

Financially Quantify Cyber as a Business Risk

A Risk Quantification Platform

RQ (Risk Quantifier) is a decision support platform that enables organizations to understand the financial exposure from a cyberattack and trace back to the area of impact. RQ combines your existing data with our database of attack and loss intelligence to compute the financial loss of a cyberattack and recommend mitigations that provide the best financial return. Ultimately, business and security leaders can make collaborative and strategic decisions on how to transfer or mitigate those prioritized cyber risks.

Answering key business questions

To quantify cyber risks, RQ considers all dimensions: the Business, IT, and the Attacker. Equipped with this perspective, the following key questions can be answered to enable a sound business strategy for cyber:

1.

What's my risk?

Determine what business assets are exposed: money, data, reputation, or enterprise value. Register risks with the enterprise priorities.

2.

How does it happen?

Understand how the attacker reached the asset and what controls were circumvented. Assess the efficacy of security controls.

3.

Where's the impact?

Trace where in the IT environment a risk can be realized. Detail the correlation between business assets and IT applications to support mitigation efforts.

4.

What should I do?

Empower informed risk mitigation for prioritized cyber risks. Compute ROI of security investments to justify initiatives.

Armed with financially-quantified intelligence, Security Ops can...

Garner Enterprise Support

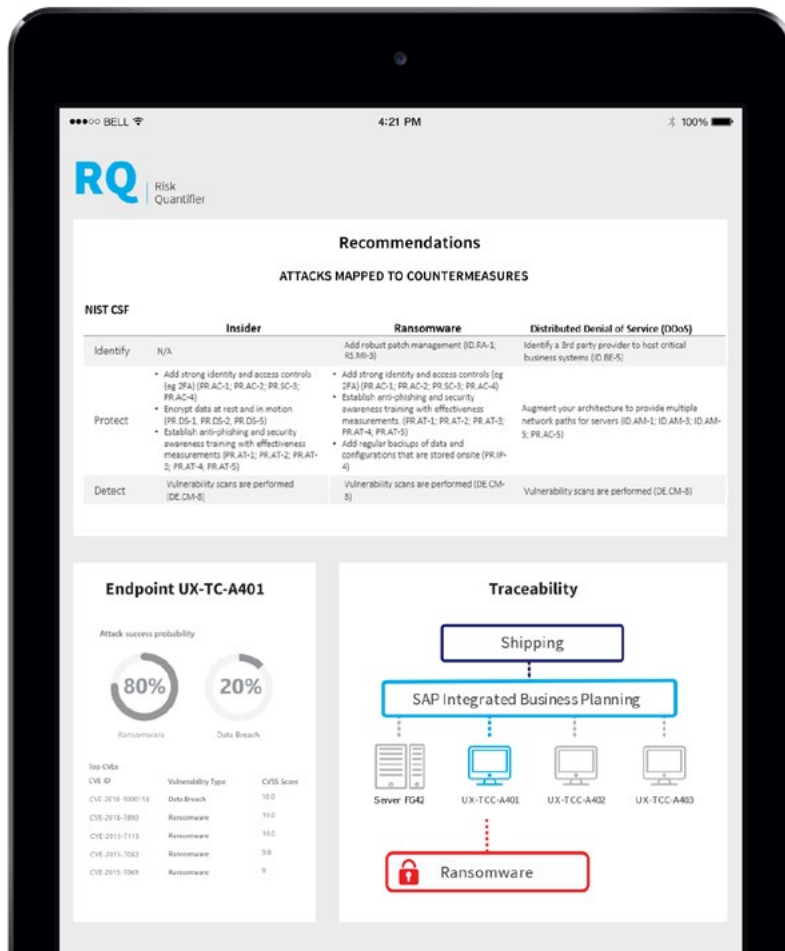

Deliver cyber intelligence that the business can understand, appreciate, and use to take action.

Transfer Risks Intelligently

Compute ROI to make informed decisions when accepting, mitigating, or insuring against a risk.

Justify Budget

Monitor cyber risk over time and justify investments for loss exposure reduction.

Getting started with RQ

“We started simple, focusing on and modeling two business processes. RQ’s

step-by-step wizard *enabled us to enter relevant business and technical data. This was the first step in our journey to align our operations with our business priorities.”*

—CISO, Mid-sized Financial Institution

About Nehemiah Security

Nehemiah Security works with enterprises around the world to elevate the security conversation and answer the question, “How does this impact my business?” Our mission is to empower security leaders to integrate their operations into the suite of functions corporations monitor and invest in every day.
