

# ResilienceONE for Business Impact Analysis

A strong Business Impact Analysis (BIA) helps organizations improve resilience against threats to people, processes, property, and IT assets. The ResilienceONE BIA uses our proprietary methodology to help you build your BIA quickly and effectively. With ResilienceONE BCM software you can:

**Use proprietary algorithms and metrics** with custom reporting on all fields to easily access and manage risk objectively.

**Accommodate quantitative factors** such as loss of revenue and increased costs along with qualitative factors such as reputational damage to address risk impact.

**Identify and link all associated business processes and assets** even from third parties with their relative downtime impact to establish priorities and plans for resiliency.

## Downtime Impact Analysis & Recovery Timeframe Objectives

Identify business functions that cause the greatest business impact in an outage through Downtime Impact Analysis. This analysis information necessary to build a Business Function Recovery Schedule that determines when to recover operational processes following a disaster. Using Downtime Impact Factors, users rate the impact of each function idled. Data analysis then determines Recovery Timeframe Objectives for each function.

## Operation Blueprint with Dependency Building

The Operation Blueprint™ provides a comprehensive template for users to document and understand normal operations prior to mapping recovery plans. It maps business processes and links resources to business functions, delivering a comprehensive Operation Blueprint for each business function. Once the Operation Blueprint is complete; ResilienceONE automatically prioritizes

infrastructure, personnel, and vendors that support your operations for use in [Disaster Recovery Planning](#).
