queue

Demc  
d

nackers do

of tasks

Identify weaknesses before they're exploited while lowering the cost of cybersecurity risk management.

Prioritize tasks from numerous sources including vulnerability scanning tools, risk assessments and incidents.

Comply with regulators b your vulnera activities.

## How it works

Collapse All

### Synchronized Assets, Vulnerabilities and Tickets

Centralized organizational repository that can consume external data feeds, for a single view of all related objects, vulnerabilities and work streams in the entire organization. Integrates with NeXpose, Qualys and dozens more.

### Configurable Workflows and Scoring

avings and  
er additional

### Actionable, detailed and thorough reports —

Build detailed and high-level reports for digital asset owners and executive leadership.

### Automated business risk acceptance workflow —

Accept and justify risks you choose not to treat so your record keeping is complete.

### Remediation Workflows —

Risk treatment plans are ineffective if not executed. Use the system's built-in notifications to ensure responsible persons are reminded of outstanding work on timelines of your choosing.

### Mobile applications —

[LOGIN](#)[REQUEST DEMO](#)

## Cybersecurity incident management dashboards —

Capture notification and incident data on a single dashboard, or integrate to capture incident management activities from other solutions

## Custom fields, workflows and more —

Custom Field and Type support enables consistent, meaningful labeling and rolling-up of data for insightful reports and analytics. Formulas, workflows, integrations, reports, and assessments can be configured to tailor the solution to your organization.

## Information Security Training —

Detect, avoid, and report information security risks, breaches, and phishing attacks by ensuring employees to detect, avoid and report when your organization becomes the next target.
