Uncover and address the full spectrum of IT risk across the enterprise

Digital enterprise risk management promotes better IT governance by taking a risk-based approach to information security and planning. The solution provides stakeholders with access to valuable business intelligence collected from daily activities such as security threat assessments and application configuration management.

Understand dependencies between business processes and critical assets

Create dynamic reports to evaluate your risk matrices and loss database. The powerful risk matrix feature lets you map business controls to compliance requirements, policies and technical controls. The loss database feature incorporates findings from compliance projects, risk assessments and incident reports.

Capture data and sync findings across digital risk projects

Leverage specialized tools including out-of-the-box reports and dashboards, automation rules, surveys and mobile apps to implement effective digital enterprise risk management practices.

Reduce time spent analyzing risk, compliance and security findings whilst concentrating on eliminating low-cost, high-priority risks and reporting high-cost cybersecurity issues to management.
