Risk
Quantification

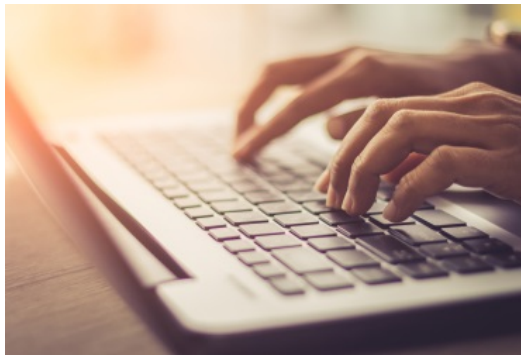

X-Analytics:
Cybersecurity
ROI Analysis

X-Analytics® is the world's first cyber risk quantification model used to financially model cyber risk exposure end-to-end across the risk management ecosystem. Our patented model is being used to underwrite billions of dollars of affirmative cyber risk insurance, produce board-level cyber risk analysis, and quantify aggregated cyber risk across portfolios and the reinsurance market.

The ability to deliver true cyber risk understanding and interconnect board-level cyber risk understanding, cybersecurity ROI analysis, and the transfer of cyber risk into insurance is the future of enterprise cyber risk management.

Learn how X-Analytics delivers cyber risk clarity end-to-end across the risk management ecosystem by visiting our purpose-built offerings above.
