Financial Institutions

Growing regulatory environment, higher business complexity and increased focus on accountability have led financial institutions to pursue additional cyber initiatives across the organization. We specialize in risk assessment and compliance including FFIEC CAT, PCI and other standards.

Cyber insurance coverage calculation

For a mid-size national bank, we developed a rigorous SR11-7 compliant cyber risk model. The model can be used for regulatory stress test and capital planning exercises for operational risk. A key part of their Infosec program is the data asset inventory and cyber risk profile. This model enabled them to allocate resources and make investment decisions based on ROI.

Loss forecasting

VivoSecurity creates strong SR11-7 and SR15-18 compliant models using cross-company data. These models provide credible loss forecasting based on empirical data and deterministic models.
